Antenna Multicoupler, First manufactured in 1953 by TMC Limited, Ottawa Canada and Mamaroneck NY, this device is a broadband RF amplifier which allowed a common antenna to drive up to six different receivers in the range between 2 and 30 Mcs. A switchable filter would provide 35 db attenuation against interference from signals below 1.5 Mcs and each output port provides 10 db gain when the filter is switched in. Dimensions: 8.75" H x 10"W x 11" D. Weight - 37 pounds. Power input - 115/230VAC, 60 Hz, 90 watts. A number of different model numbers were built depending on the impedance of the input antenna (50 to 600 ohms, balanced/unbalanced) and the number of outputs required.

AS-4366A/U - VHF Broadband Antenna System; Antenna System AS-4366A/U (NSN: 5985-21-920-0045). Mfg: VALCOM Manufacturing Group Inc., Guelph, Ontario, Canada N1H 6L3. Frequency Range: 30 MHz to 88 MHz. The AS-4366A/U is a general purpose VHF broadband communications antenna system. Ideal for shipboard applications, this antenna system is a base mounted version of the AS-3900A/VRC, featuring rugged construction and rigid mounting of the whip section. The AS-4366A/U antenna system provides omni-directional, vertically polarized coverage over the 30 to 88 MHz frequency range. It is conservatively rated for 150 Watts of RF input power and exhibits a VSWR of less than 3.5:1 over the entire operating band with reference to a 50 Ohm line impedance. The Input RF connection is made through a single coaxial N-Type connector located centrally on the bottom of the mounting base. The mounting base houses the matching unit and electro-magnetic pulse (EMP) protection. A two-piece, permanently joined fibreglass whip element and a polycarbonate mounting base with a rigid antenna support make up the antenna system's simple two-piece construction. It is approximately 110 inches in height, has an antenna element diameter of less than 1 inch and weighs about 11 pounds. The antenna system has been designed to meet the vibration and service requirements of MIL-S-901, Type A and MIL-STD-810. Mounting is provided by four 0.453 inch diameter holes (for 3/8 hardware) on a 4.5 inch diameter bolt circle located on the mounting flange at the base of the antenna system.

C-12311/AL - Universal Control Box (UCB) (C-12311/AL) is a fully programmable, digitally controlled, electronic countermeasures (ECM) indicator. The UCB was developed to meet the requirement of having one control indicator operate the various pods utilized in the electronic warfare arena. It is capable of controlling up to four ECM, active emitter, and/or chaff pods. The pods that can be controlled by the UCB include the AN/ALQ-167(V) (ALQ-167) countermeasures set, the AN/AST-6(V) (AST-6) radar emission simulating set, and the AN/ALE-43 (ALE-43) chaff dispensing pod. The UCB is capable of selecting one of 15 available modes of operation for the ALQ-167 and can select one of 99 different preprogrammed missile simulation scenarios for the AST-6. When used to control the ALE-43, it is capable of selecting one of three different programmable dispensing modes, with an adjustable time option capability in two modes.

C-12459/AL - The Mini UCB (Universal Control Box) (C-12459/AL) is also a fully programmable, digitally controlled, ECM indicator. However, it can only control either a single ECM or active emitter pod. The Mini UCB was designed and developed to fit into the limited space available on the A-4 aircraft. The location of the control indicator in the current cockpit configuration of the A-4 is unsuitable for the regular UCB. The mini UCB is designed to use the same interface, command, and control circuitry as the regular UCB. The pods that can be controlled by the mini UCB include the AN/ALQ-167 countermeasures set and the AN/AST-6 radar emission simulating set. The mini UCB is capable of selecting one of 15 available modes of operation for the AN/ALQ-167 and can select one of 99 different preprogrammed missile simulation scenarios for the AN/AST-6.

CCS B10.2 — Counter Communications System Block 10.2 (Ground-Based Satellite Communications Jamming System): CCS B10.2. Mfr: L3Harris. USAF. ~2020. "U.S. Space Force has begun operating a new offensive weapon system, an upgraded

version of a Ground-Based Satellite Communications Jamming System, for the first time in its short history. The first iteration of the Counter Communications System entered U.S. Air Force service in 2004 and the program has now gotten transferred to the newest branch of the American military. The Space Force declared it had reached initial operational capability with the Counter Communications System Block 10.2, or CCS B10.2, on Mar. 9, 2020". ~ 21st Space Wing squadron poised to receive first Space Force weapon system (<http://archive.li/aejto>).

CCS B10.3 – Counter Communications System Block 10.3 (Ground-Based Satellite Communications Jamming System): CCS B10.3. Mfr: L3Harris. USAF. "(2019) Harris also received a \$72 mil contract to begin developing the new iteration, the Block 10.3 variant. As of September 2019, the USAF reportedly had at least seven complete CCS packages (вероятно CCS разных блоков, 10.1, 10.2 и более ранних – сост.), which are intended to be rapidly deployable".

CN-1717/A - Interference Cancellation Systems (INCANS). Пр-ль: EDO Corporation (на 2017-2018 гг - © 2018 Harris Corporation). U/W (on) EA-18G. The Interference Cancellation System (INCANS) is an aircraft-mounted system that provides secure voice communications with friendly forces while simultaneously jamming enemy communications. EDO

Corporation is developing INCANS for the US Navy's EA-18G electronic attack aircraft. The first INCANS System Development and Demonstration (SDD) model was scheduled for delivery to Boeing for testing by June 2006. The main concern on INCANS is its compatibility with the AN/ALQ-99 tactical jamming system which is another key element to be integrated onto the EA-18G aircraft. The EA-18G electronic attack aircraft equipped with INCANS is scheduled to replace US Navy's aging EA-6B Prowler fleet in 2009.

"DTS-K CP-2635(C)/A Link-11 Data Terminal Set with Embedded Crypto. Communicate Link-11 data. Similar to the AN/USQ-130 DTS, the DTS-K performs as a modem, communicating tactical command and control data between ship, shore and air platforms on the Link-11 system. However, the DTS-K also provides National Security Agency (NSA) certified encryption capabilities. DTS-K has three primary functions: first, to handle message flow from one station to another; second, to transmit and receive data; and third, to encrypt and decrypt sensitive data for Communication Security (COMSEC). Working as one integrated system, it ensures that all sensitive communications within the Link-11 network are properly protected. The system can be operated remotely from the cockpit and can be configured to provide the Single-Tone Link-11 (SLEW) waveform in high-traffic environments. It can also be configured to connect to an alternate Link-22 network".
